Conobathra tumidana (D. & S.). 26 July 2003 at Totland by Sam Knill-Jones.
Nascia cilialis (Hb.) 7 August 2003 at Totland by Sam Knill-Jones.
<i>Dioryctria sylvestrella</i> (Ratz.) 4 August 2003 and 7 August 2003 at Bonchurch by James Halsey.
<i>Ennomos autumnaria</i> (Werneburg) 29 August 2003 at the Dinosaur Park, Sandown, observed and photographed by G. A. Henwood.
Macaria signaria (L.) Dusky Peacock 23 June 2003 at Bonchurch by James Halsey. This is the thirteenth British record.
Lacanobia splendens (Hb.) Splendid Brocade 5 July 2003 at Totland by Sam Knill-Jones.
Heliothis nubigera (HS.) Eastern Bordered Straw23 July 2003 at electric light at the coast guard cottages at Alum Bay near the The Needles, by Martin Harvey & Dan Hoare. This is the sixth British record of this species.
Finally, records for four Jersey Mocha <i>Cyclophora ruficiliaria</i> (D. & S.) on 16 August 2003 Gompton Bay and a further one on 18 August 2003, by Alec Kolaj, Diane and Peter Sharp await confirmation that they are this species.– SAM KNILL-JONES, 1

Pandemis heparana (D. & S.) (Lep.: Tortricidae) feeding on Hop Humulus lupulus

Moorside, Moons Hill, Totland, Isle of Wight P039 OHU.

Further to my note on Lepidoptera found on Hop Humulus lupulus L. while searching for larvae of the Buttoned Snout Hypena rostralis L. (antea: 77-78), I also collected a small green tortricoid larva from the hedgerow at Etton, Northamptonshire, on 19 July 2003. This larva was subsequently reared on Hop, duly producing an adult moth on 2 August 2003 which has since been identified as Pandemis heparana (D.&S.) the Dark Fruit-tree Tortrix The identification was provided by Barry Dickerson, County Moth Recorder for Huntingdonshire, to whom I am most grateful. Pandemis heparana has been reported from various trees and shrubs, especially Malus, Prunus, Pyrus, Tilia, Salix, Lonicera, Betula, Ribes, Vaccinium and Myrica (Bradley, Tremewan & Smith, 1973. British Tortricoid Moths. Ray Society), but neither this work, nor Emmet (1979. A field guide to the smaller British Lepidoptera, BENHS) report this species as feeding on Hop. The larval foodplant data-base (HOSTS) at the website of the Natural History Museum does record Humulus as a food-plant, possibly on the basis of records from North America. As hops are grown commercially, this foodplant record may be of particular interest. — PAUL WARING, Reader, Centre for Environment & Rural Affairs, Writtle College, Essex.
